

Watchdog Service[™]

Your business relies on the Internet – so why leave your Internet to chance?

Our Watchdog Service[™], a next-generation SD-WAN solution, provides safeguards to your entire business structure -- not just your communication system. This turnkey solution will maximize your network, remove the need for expensive technicians, and eliminate dropped calls if your Internet goes out. Plus, it can be working for you in less than 30 minutes.

Watchdog Service[™] Benefits

Single System that Safeguards ALL Devices

Maximize the performance of your Internet connection(s) with one device for Quality of Service (QoS) and superior management of your Internet bandwidth for Internet connected equipment: phones, POS, payment processing & computers.

Easy Implementation

This plug & play service allows you to skip complicated engineering and network design, reducing the cost of expensive network consultants.

Maximize Performance

Priority management with QoS and Traffic Steering, which delivers top performance to your prioritized devices to maximize customer experience and revenue assurance.

Service Logs

End the battles with your ISP with logs that tell your definitive story. Troubleshoot your ISP challenges for quick resolve. No more hearing the dreaded “We don’t see any problems.”

Personalized Support

Technically certified advisors can configure your system based on industry best practices, for complex business environments, and troubleshoot issues.

24/7 Failsafe[™] Monitoring

Clarity’s Watchdog Service[™] monitors the performance of your network and ISP connection, and alerts you to potential problems.

Security

Every device connected via WiFi or ethernet to the Watchdog Service[™] device will be protected from predators.

Rest assured: your customers’ data will be secure.

Failsafe[™] Voice & Video

Safeguard against dropped in-progress calls and videos. Our proprietary failover switches to LTE back-up without even a blip.

Software Updates

We’ll instantly update Watchdog[™] and provide network-tuning support to maximize performance. Plus, we implement security patches to stay up-to-date on the latest advances by hackers.
